

Glacier/Mogul Hot Tank

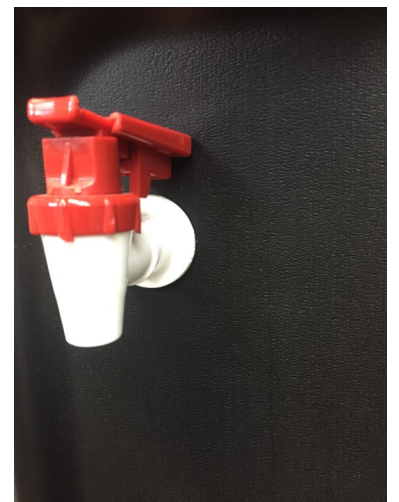

Pt# SUB-C100288

The new style tank will be different from the old tank. It may be necessary to drill out the screw holes on the mounting bracket slightly as your screws may be a slightly different size.

After removing the old tank, the new model should be able to be screwed into the existing shelf. If necessary, the older style shelf can be ordered to replace the existing one (pt# SMT-C100113—shown below left). Once the tank is attached and wired up, install the cabinet and attach the faucets.
