## Crystal Pro with LED UV

Form 2004002

Effective after Ser# 19192470012

As part of the on-going changes and updates to the Crystal Pro cooler, Crystal Mountain will be transitioning the Crystal Pro cooler from the current version with the UV bulb to a unit with an LED UV system. The new system will still have UV treatment at the point of dispense but will also include another LED built into the reservoir lid. This change affects not just the UV system but also circuit boards, some panels, the reservoir, etc. The components of the new system and the components of the old system are not interchangeable. There are differences in construction as well as differences in electrical terminations. Photos illustrating some of these differences are below and on the following page.

Water Outlet and UV, Old Style
