

Installation Instructions

Changing out Tomlinson Flipper Style Handles for Cup Trip Handles

Form 2006001

It is a fairly easy process to replace a standard Tomlinson flipper handle with a Cup Trip handle.

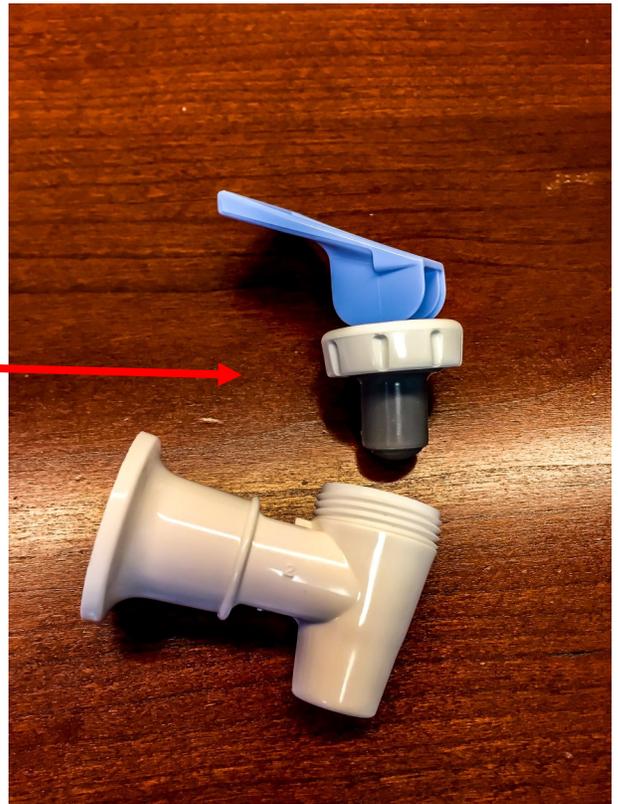

Note: Sterile gloves must be worn when handling any components that have contact with the drinking water for sanitary purposes.

1. Begin by unscrewing the bonnet and upper assembly from the faucet body. This unscrews by twisting the bonnet counter-clockwise to loosen (Fig 1).
2. When loosened completely, pull this upper assembly out of the body (Fig 2).

3. The flipper attaches to a stem in the center of the upper assembly. There are two tabs on the handle (Fig 3) that slide “up and in” into a corresponding groove on the stem to secure it in place (Fig 4).
4. To replace the handle, squeeze and push upward on the rubber stopper to push the stem upward (Fig 5).

5. The Cup Trip handles have the same tabs as seen on the standard flippers (Fig 6).
6. Push the stopper upward from below and slide the tabs into the grooves in the stem (Fig 4). When secured, release the stopper (Fig 7).
7. Screw the upper assembly into the faucet body (clockwise) until hand tight (Fig 8). The Tomlinson logo will face inward to the cooler.

It is important to note that there is no dual action or child resistant function on the hot faucet when using these cup trip handles in place of the TouchGuard™ handles normally used. Crystal Mountain will not be held liable for any circumstances involving any of our water coolers, whereby the hot faucet handle has been replaced using a cup trip handle.

The part numbers for the new Cup Trip Handles are below.

FAU-C000068 Handle, Cup Trip, Blue

FAU-C000069 Handle, Cup Trip, White

If there are additional questions or if it is necessary to place an order, please contact your local Crystal Mountain representative.
